CUBIST (Combining and Uniting Business Intelligence with Semantic Technologies) is an EU-funded research project that investigates the combination of semantic technologies for harvesting and persisting data from a variety of data sources (both unstructured and structured) and FCA-based visual analytics for exploring and analysing the data in a meaningful way.

This workshop provides a forum for both research and practice for CUBIST-related research topics and technologies in order to facilitate interdisciplinary discussions. Related topics are:

- * Business intelligence over unstructured and structured data

- * Semantically enabled ETL processes

- * Semantics of data cubes

- * Triple stores as "information warehouses"

- * Ontology-based data warehouse design

- * Formal concept analysis for business intelligence

- * Semantically enabled visual analytics

The 3rd CUBIST Workshop

Mercredi, 06 Février 2013 19:09 -

* Qualitative data analysis.

The proceedings will be published on-line (CEUR-proceedings).

Submission Procedure: Electronic version of full paper complete with authors' affiliations should be submitted through the conference electronic submission system.

Papers are limited to 10 pages in Springer's LNCS format and are to be submitted via EasyChair at www.easychair.org/conferences/?conf=cubistws13
