GRAPP 2010

## Objective

Decompose a triangular mesh into a set of quadrangulated patches.

## Objective

Decompose a triangular mesh into a set of quadrangulated patches.
A patch:

- is constituted of quads
- has a rectangular grid structure

## Objective

Decompose a triangular mesh into a set of quadrangulated patches.
A patch:

- is constituted of quads
- has a rectangular grid structure

## Objective

Decompose a triangular mesh into a set of quadrangulated patches.

A patch:

- is constituted of quads
- has a rectangular grid structure

## Motivation

Patches can be used for:

- interpolating or approximating a surface by a continuous representation,
- making reverse engineering to recognize the grid of the control points,
- compressing 3D mesh geometry without describing the topology,
- applying subdivision schemes,
- doing numerical simulation based on finite elements.

## Constraints

Assumption: the mesh coordinates are exact $\Rightarrow$ do not change the shape:

## Initial mesh

## Constraints

Assumption: the mesh coordinates are exact $\Rightarrow$ do not change the shape:

- the vertices must be preserved,
- the edges are derived from the original triangular mesh.

## Constraints

Assumption: the mesh coordinates are exact $\Rightarrow$ do not change the shape:

- the vertices must be preserved,
- the edges are derived from the original triangular mesh.

To create patches $\Rightarrow$ last constraint:

## Constraints

Assumption: the mesh coordinates are exact $\Rightarrow$ do not change the shape:

- the vertices must be preserved,
- the edges are derived from the original triangular mesh.

To create patches $\Rightarrow$ last constraint:

- the quadrangulated meshes are decomposed into quad rectangular grids.

Initial mesh

## Outline

(1) Presentation of the Decomposition Method

- Computation of a Quality Coefficient
- Construction of Quadrangulated Areas
- Decomposition into Quadrangulated Patches
(2) Experimental Results
- First Results
- Threshold Variations
- CAD Objects
(3) Conclusion and Future Work
- Conclusion
- Future Work

## Our method

3 steps:
(1) Computation of a quality coefficient for each pair of adjacent triangles
(2) Construction of quadrangulated areas, using the quality coefficients
(3) Decomposition into quadrangulated patches from quadrangulated areas

## 1) Computation of a Quality Coefficient

Computation of the quality coefficient $Q$ based on:

- dihedral angle ( $\phi$ )
- angles between connected edges $\left(\alpha_{i}\right)$

## 1) Computation of a Quality Coefficient

Computation of the quality coefficient $Q$ based on:

- dihedral angle $(\phi)$
- angles between connected edges $\left(\alpha_{i}\right)$

$$
Q= \begin{cases}2 \pi & \text { if } \phi<\phi_{\min } \\ \frac{1}{4} \sum_{i=1}^{4}\left|\frac{\pi}{2}-\alpha_{i}\right| & \text { elsewhere }\end{cases}
$$

## 1) Computation of a Quality Coefficient

Computation of the quality coefficient $Q$ based on:

- dihedral angle ( $\phi$ )
- angles between connected edges $\left(\alpha_{i}\right)$

$$
Q= \begin{cases}2 \pi & \text { if } \phi<\phi_{\min } \\ \frac{1}{4} \sum_{i=1}^{4}\left|\frac{\pi}{2}-\alpha_{i}\right| & \text { elsewhere }\end{cases}
$$

$$
\text { if } Q \approx 0
$$

## 1) Computation of a Quality Coefficient

Computation of the quality coefficient $Q$ based on:

- dihedral angle ( $\phi$ )
- angles between connected edges $\left(\alpha_{i}\right)$

$$
Q= \begin{cases}2 \pi & \text { if } \phi<\phi_{\min } \\ \frac{1}{4} \sum_{i=1}^{4}\left|\frac{\pi}{2}-\alpha_{i}\right| & \text { elsewhere. }\end{cases}
$$

if $Q \approx 0 \Rightarrow$ quad $\approx$ planar rectangle

## 1) Computation of a Quality Coefficient

Computation of the quality coefficient $Q$ based on:

- dihedral angle ( $\phi$ )
- angles between connected edges $\left(\alpha_{i}\right)$

$$
Q= \begin{cases}2 \pi & \text { if } \phi<\phi_{\min } \\ \frac{1}{4} \sum_{i=1}^{4}\left|\frac{\pi}{2}-\alpha_{i}\right| & \text { elsewhere }\end{cases}
$$

if $Q \approx 0 \Rightarrow$ quad $\approx$ planar rectangle $\Rightarrow$ quad with good quality

## 2) Construction of Quadrangulated Areas

## Iterative construction of quadrangulated areas:

Start with the best $Q$.

## 2) Construction of Quadrangulated Areas

Iterative construction of quadrangulated areas:
Find the quad with the best $Q$ in the neighborhood

## 2) Construction of Quadrangulated Areas

Iterative construction of quadrangulated areas:
No new quad can be created.

## 2) Construction of Quadrangulated Areas

Iterative construction of quadrangulated areas:

Left triangles:

- isolated triangles $\qquad$
- triangles of quads with $Q>Q_{\max }$

## 3) Decomposition into Quadrangulated Patches

3.1) The quads are arranged into "rectilinear polygons"

## 3) Decomposition into Quadrangulated Patches

3.1) The quads are arranged into "rectilinear polygons"

Each quad is labeled with a position using neighbors

## 3) Decomposition into Quadrangulated Patches

3.1) The quads are arranged into "rectilinear polygons"

Each quad is labeled with a position using neighbors

## 3) Decomposition into Quadrangulated Patches

3.1) The quads are arranged into "rectilinear polygons"

Each quad is labeled with a position using neighbors

## 3) Decomposition into Quadrangulated Patches

3.1) The quads are arranged into "rectilinear polygons"

Each quad is labeled with a position using neighbors

|  |  |  |
| :--- | :--- | :--- |
|  | $(0,0)$ |  |
|  |  |  |

|  | $(-1,0)$ |  |
| :--- | :--- | :--- |
| $(0,-1)$ | $(0,0)$ | $(0,1)$ |
|  | $(1,0)$ |  |
| Step 1 |  |  |

| $(-1,-1)$ | $(-1,0)$ | $(-1,1)$ |
| :--- | :--- | :--- |
| $(0,-1)$ | $(0,0)$ | $(0,1)$ |
| $(1,-1)$ | $(1,0)$ | $(1,1)$ |
| Step $n$ |  |  |
|  |  |  |

Example:

## 3) Decomposition into Quadrangulated Patches

3.1) The quads are arranged into "rectilinear polygons"

Each quad is labeled with a position using neighbors

|  |  |  |
| :--- | :--- | :--- |
|  | $(0,0)$ |  |
|  |  |  |

|  | $(-1,0)$ |  |
| :---: | :---: | :---: |
| (0,-1) | $(0,0)$ | $(0,1)$ |
|  | $(1,0)$ |  |

| $(-1,-1)$ | $(-1,0)$ | $(-1,1)$ |
| :--- | :--- | :--- |
| $(0,-1)$ | $(0,0)$ | $(0,1)$ |
| $(1,-1)$ | $(1,0)$ | $(1,1)$ |
| Step $n$ |  |  |

Example:

|  | $-1,0$ |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| $0,-1$ | 0,0 | 0,1 |  |  |
|  | 1,0 |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |

## 3) Decomposition into Quadrangulated Patches

3.1) The quads are arranged into "rectilinear polygons"

Each quad is labeled with a position using neighbors

|  |  |  |
| :--- | :--- | :--- |
|  | $(0,0)$ |  |
|  |  |  |

|  | $(-1,0)$ |  |
| :---: | :---: | :---: |
| (0,-1) | $(0,0)$ | $(0,1)$ |
|  | $(1,0)$ |  |

| $(-1,-1)$ | $(-1,0)$ | $(-1,1)$ |
| :--- | :--- | :--- |
| $(0,-1)$ | $(0,0)$ | $(0,1)$ |
| $(1,-1)$ | $(1,0)$ | $(1,1)$ |
| Step n |  |  |
|  |  |  |

Example:

## 3) Decomposition into Quadrangulated Patches

3.1) The quads are arranged into "rectilinear polygons"

Each quad is labeled with a position using neighbors

|  |  |  |
| :--- | :--- | :--- |
|  | $(0,0)$ |  |
|  |  |  |

|  | $(-1,0)$ |  |
| :---: | :---: | :---: |
| (0,-1) | $(0,0)$ | $(0,1)$ |
|  | $(1,0)$ |  |

| $(-1,-1)$ | $(-1,0)$ | $(-1,1)$ |
| :--- | :--- | :--- |
| $(0,-1)$ | $(0,0)$ | $(0,1)$ |
| $(1,-1)$ | $(1,0)$ | $(1,1)$ |
| Step $n$ |  |  |

Example:

| $-1,-1$ | $-1,0$ |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| $0,-1$ | 0,0 | 0,1 | 0,2 | 0,3 |
| $1,-1$ | 1,0 | 1,1 | 1,2 |  |
|  | 2,0 | 2,1 |  |  |
|  | 3,0 |  |  |  |

## 3) Decomposition into Quadrangulated Patches

3.1) The quads are arranged into "rectilinear polygons"

Each quad is labeled with a position using neighbors

|  |  |  |
| :--- | :--- | :--- |
|  | $(0,0)$ |  |
|  |  |  |

|  | $(-1,0)$ |  |
| :---: | :---: | :---: |
| (0,-1) | $(0,0)$ | $(0,1)$ |
|  | $(1,0)$ |  |

| $(-1,-1)$ | $(-1,0)$ | $(-1,1)$ |
| :--- | :--- | :--- |
| $(0,-1)$ | $(0,0)$ | $(0,1)$ |
| $(1,-1)$ | $(1,0)$ | $(1,1)$ |
| $\operatorname{Step} n$ |  |  |

Example:

| -1,-1 | -1,0 |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 0,-1 | 0,0 | 0,1 | 0,2 | 0,3 |
| 1,-1 | 1,0 | 1,1 | 1,2 | 1,3 |
|  | 2,0 | 2,1 | 2,2 |  |
|  | 3,0 | 3,1 |  |  |

## 3) Decomposition into Quadrangulated Patches

3.1) The quads are arranged into "rectilinear polygons"

Each quad is labeled with a position using neighbors

|  |  |  |
| :--- | :--- | :--- |
|  | $(0,0)$ |  |
|  |  |  |

|  | $(-1,0)$ |  |
| :---: | :---: | :---: |
| (0,-1) | $(0,0)$ | $(0,1)$ |
|  | $(1,0)$ |  |

| $(-1,-1)$ | $(-1,0)$ | $(-1,1)$ |
| :--- | :--- | :--- |
| $(0,-1)$ | $(0,0)$ | $(0,1)$ |
| $(1,-1)$ | $(1,0)$ | $(1,1)$ |
| $\operatorname{Step} n$ |  |  |

Example:

| -1,-1 | -1,0 |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 0,-1 | 0,0 | 0,1 | 0,2 | 0,3 |
| 1,-1 | 1,0 | 1,1 | 1,2 | 1,3 |
|  | 2,0 | 2,1 | 2,2 | 2,3 |
|  | 3,0 | 3,1 |  |  |

| $Q_{\max }$ | $\phi_{\min }$ | \# patches | Covering | Time |
| :---: | :---: | :---: | :---: | :---: |
| $\frac{\pi}{2}$ | $\frac{5 \pi}{6}$ | 931 | $91.39 \%$ | 2 min |
| $\pi \nearrow$ | $\frac{5 \pi}{6}$ | $519 \searrow$ | $98.52 \% \nearrow$ | 4 min |
| $2 \pi \nearrow$ | $2 \pi \nearrow$ | $502 \searrow$ | $98.56 \% \nearrow$ | 5 min 30 sec |

## CAD Objects

$$
Q_{\max }=\frac{\pi}{2} / \phi_{\text {min }}=\frac{5 \pi}{6}
$$

## CAD Objects

$$
Q_{\max }=\frac{\pi}{2} / \phi_{\min }=\frac{5 \pi}{6}
$$

## Conclusion

Our method:

- decomposes a triangular mesh into quadrangulated patches,
- has the particularity to use only the vertices and the edges of the triangular mesh,
- is implemented in the C4W framework.

## Future Work

- Define other quality coefficients,
- Improve the quad propagation to minimize the number of isolated triangles,
- Optimize the rectilinear polygon search,

易 Soltan et al.
Minimum Dissection of a Rectilinear Polygon with Arbitrary Holes into Rectangles
Discrete and Computational Geometry
 9(1):57-59 1993

- Use feature lines to guide the patch boundaries.
